LYMON CONSULTING S.A. DE C.V
SCRUM ALLIANCE
May 2017

Introducción al Desarrollo Web

UNIVERSITAT D'ALACANT , ACTIVATE BY GOOGLE
May 2016

WORK EXPERIENCE

Freelance Front End Developer

FREELANCE   September 2018 - Present

Development of websites and custom applications for different businesses and personal clients. Creation of custom solutions using WordPress, React, and Next.js. I specialize on the frontend side of projects but I can understand backend solutions too.

Middle Frontend Engineer (Product)

THIRTY3   March 2021 - July 2021

Development of SSR web apps and landing pages. During my time there I helped to create a platform (Catalysta) for artists who wanted to sell their art online. I created landing pages and modules for the platform: from user authentication to session management with JWTs. Next.js was the foundation of this project and we also used TailwindCSS to create the styles for the whole application.

I also helped with the creation of the administration module, using Vue and integrating with the backend which was written in Django.

Middle Front End Developer

AMK TECHNOLOGIES   October 2016 - September 2018

Development of microsites, landing pages, and internal tools (Dashboards, user and campaigns administration), helped to create a back office solution and I was in charge of integrating our apps with 3rd party apps via RESTful APIs.

I also created documentation and educational material about prototyping for the web, design, and UI/UX, using tools like Figma, Zeplin, and InVision. I helped the design team to work closely with the frontend team.

Junior Frontend Developer

GRUPO SALINAS   December 2015 – April 2016

Development of UIs and internal tools for data visualization and report generation. I helped creating several internal tools to forecast data and predict the usage of applications. Also helped with application monitoring and support (helpdesk).

Webmaster / Frontend Developer

IDI MARKETING   December 2012 – December 2014

Creation and design of websites and apps for local businesses in Mexico City. Creation of responsive microsites, banners, and custom solutions using WordPress and PHP Cake.
